

Amendments to the claims:

Please replace all prior versions and listings of the claims with the following amended claims:

Listing of Claims:

- 1 1. (Currently Amended) A device comprising a cleaning head, the cleaning head
2 comprising:
3
4 a) a first region with a first support surface having bristles protruding therefrom, the
5 first support surface being configured to move in a first direction; and
6 ~~[[a)] b)~~ a first second region with a first second support surface having a first
7 squeegee element and bristles protruding therefrom, the squeegee element
8 having elongated walls that protrude to form an elongated wiping edge
9 configured to treat a working surface, ~~the first support surface being~~
10 ~~configured to move in a first direction; and~~
11 b) ~~a second region with a second support surface having bristles protruding~~
12 ~~therefrom and being configured to simultaneously treat the working surface,~~
13 wherein the second support surface is configured to move separately from the first
14 support surface in a second direction that is different from the first direction and wherein
15 a portion of the bristles protruding from the first support surface and the second support
16 surface flank opposed sides of the elongated walls.
- 1 2. (Currently Amended) The device of claim 1, wherein the ~~second~~ first support surface has
2 a second squeegee element protruding therefrom.
- 1 3. (Canceled).
- 1 4. (Previously Presented) The device of claim 1, wherein the at least one of the first support
2 surface and second support surface is configured to rotate or oscillate.
- 1 5. (Canceled).

1 6. (Previously Presented) The device of claim 1, wherein the elongated walls of the first
2 squeegee element encircle an inner squeegee region.

1 7. (Canceled).

1 8. (Canceled).

1 9. (Canceled).

1 10. (Canceled).

1 11. (Canceled).

1 12. (Currently Amended) A device comprising a motorized cleaning head, the motorized
2 cleaning head comprising:

- 3 a) a first region with bristles protruding from a first support surface that is
4 configured to automatically move in a first direction; the first region comprising:
5 i. a squeegee member with elongated curved elongated squeegee
6 walls that protrude from the first support surface to form a
7 curved elongated wiping edge; and
8 ii. bristles that protrude from the first support surface; and
9 b) a second region comprising:
10 i. a squeegee member with curved elongated squeegee walls that
11 protrude from a second support surface to form a curved elongated
12 wiping edge; and
13 ii. bristles that protrude from the second support surface,
14 with bristles protruding from a wherein the second support surface that is configured to
15 automatically move in a second direction that is different from the first direction, wherein
16 a portion of the bristles protruding from the first support surface and the second support
17 surface flank opposed sides of the curved elongated walls.

1 13. (Canceled).

1 14. (Previously Presented) The device of claim 12, wherein at least one of the first support
2 surface and the second support surface is configured to rotate or oscillate.

1 15. (Canceled).

1 16. (Currently Amended) The device of claim 12, wherein the curved elongated squeegee
2 walls encircle at least a portion of the bristles that protrude from the first second support
3 surface.

1 17. (Canceled).

1 18. (Canceled).

1 19. (Previously Presented) The device of claim 12, wherein the first support surface and the
2 second support surface are both configured to rotate or oscillate.

1 20. (Currently Amended) A cleaning device comprising a detachable cleaning head
2 comprising:

3 a) a first section with a first support surface with a squeegee wiping element
4 protruding therefrom and being configured to automatically rotate or
5 oscillate while coupled to a motorized handle; and

6 b) a second section with a second support surface with a squeegee wiping
7 element protruding therefrom and surrounding the first section and being
8 configured to automatically rotate or oscillate while coupled to the
9 motorized handle, wherein the second section is configured to
10 automatically rotate or oscillate at a rate or direction that is different from
11 that of the first section, ~~and wherein both the first support surface and the~~
12 ~~second support surface each have a squeegee wiping element protruding~~
13 ~~therefrom~~ wherein the squeegee protruding from the first support surface
14 and the squeegee from the second support surface each have opposed walls
15 that from elongated wiping edges.

1 21. (Previously Presented) The device of claim 20, further comprising bristles protruding
2 from at least one of the first support surface and the second support surface.

1 22. (Canceled).

1 23. (Canceled).

1 24. (Canceled).

1 25. (Currently Amended) A device comprising a cleaning head comprising:

- 2 a) a first support surface with a first wiping region; and
3 b) a second support surface with a second wiping region, wherein the first wiping
4 region surrounds the second wiping region, and the first support surface and the
5 second support surface are configured to move automatically and separately from
6 each other, wherein at least one of the first wiping region and the second wiping
7 region comprises a squeegee element with elongated walls that protrude to form a
8 top wiping edge, and at least one of the first wiping region and the second wiping
9 region comprises bristles.

1 26. (Currently Amended) A device comprising a cleaning head, the cleaning head
2 comprising:

- 3 a) a first support surface with a first squeegee element with a curved elongated
4 wiping edge and curved elongated walls and bristles protruding therefrom a
5 ~~portion of which border the curved wiping edge;~~
6 b) a second support surface that is separate from the first support surface, the second
7 support surface having a first squeegee element with a curved elongated wiping
8 edge and curved elongated walls and bristles protruding therefrom, wherein a
9 portion of the bristles protruding from the first support surface and the second
10 support surface which border border the curved wiping edge; and
11 c) means to couple the cleaning head to a motorized handle that automatically moves
12 the first support surface relative to the second support surface.

1 27. (Currently Amended) The device of claim 26, wherein the ~~second~~ first support surface
2 further comprises a second squeegee element protruding therefrom.

1 28. (Currently Amended) A device comprising a cleaning head, the cleaning head
2 comprising:

- 3 a) a first support surface with a first squeegee element ~~comprising~~ with opposed
4 walls that form a first elongated and continuous wiping edge configured to treat a
5 working surface, the first support surface being configured to move; and
6 b) a second support surface with a second squeegee element with opposed walls that
7 form a second elongated and continuous wiping edge configured to
8 simultaneously treat the working surface,

9 wherein at least one of the first support surface and the second support surface is
10 configured to automatically move independently and separately of the other of the first
11 support surface and the second support surface, while the cleaning head is coupled to a
12 motorized handle.

1 29. (Currently Amended) The device of claim 28, further comprising ~~bristle~~ bristles
2 protruding from the first support surface.

1 30. (Currently Amended) The device of claim 29, further comprising ~~bristle~~ bristles
2 protruding from the second support surface.

1 31. (Currently Amended) An electric toothbrush with a cleaning head, the cleaning head
2 comprising:

- 3 ~~a) a first region with a continuous and substantially circular squeegee element that~~
4 ~~encircles a portion of the first region, wherein the first region is coupled to a drive~~
5 ~~mechanism for automatically rotating or oscillating the first region; and~~

6 ~~[[b)]] a) bristles protruding from a second first region that is separate from the first~~
7 ~~region, wherein the bristles surround at least a portion of the continuous~~
8 ~~and substantially circular squeegee element, and wherein the second~~
9 ~~region is configured to rotate or oscillate; and~~

10 ~~b) a second region that is separate from the first region and having a~~
11 ~~continuous and substantially circular squeegee element that encircles a~~

portion of the second region, wherein the second region is coupled to a drive mechanism for automatically rotating or oscillating the second region and wherein the bristles surround at least a portion of the continuous and substantially circular squeegee element, and wherein the first region is configured to rotate or oscillate.

32. (Currently Amended) The electric toothbrush of claim 31, further comprising bristles protruding from the portion of the ~~first~~ second region that is encircled by the continuous squeegee element.

33. (Currently Amended) An electric toothbrush with a cleaning head, the cleaning head comprising:

- a) a first region with a first support surface having a continuous and substantially circular squeegee element that encircles bristles protruding from the first ~~supports~~ support surface and wherein the first ~~supports~~ support surface is configured to rotate or oscillate; and
- b) a second region with a second support surface configured to automatically move independently from the first supports surface, the second support surface having at least one of a squeegee, bristle tufts and nodules protruding therefrom.
